International New York Short Film Festival ''Street Food themed''

October 2-3, 2023 Manhattan, New York online and physical participation

The origin of street foods largely relies on the cultural and natural landscapes that surround the environments where they are prepared and sold. Street food illustrates a culinary heritage that is embedded in the ways of life of people, both residents and visitors.

In many places around the world, local communities and their daily lives have been affected positively by their street food cultures that bring together people in unison. Eating together brings people close and allows them to strive for one another in every possible manner.

Street food tourism is a major part of all global travel now and hence it has been supporting and boosting the economy of many small and big countries. As a matter of fact there are many countries and cities around the world that depend extensively on tourism – street food is a boon for all of them.
